S5800-48F4S (48*1GE+4*10GE) High Performance Data Center Switch

Overview

FS S5800 Series is high performance Ethernet switches to meet next generation Metro, Data Center and Enterprise Ethernet network requirements designed based on high-end scalable chipset with integration of Layer 2 to Layer 4 packet processing engine, traffic management and fabric interface.

Configurations

<table>

| NM-4SFP+    | Uplink Module for FS S5800 Series  
             | 4x1G/10G SFP+ Ethernet Port (1 G SFP compatible for S5800-48T&24T, 1 G SFP is Combo with the last 4 RJ45 ports) |
| NM-2SFP+    | Uplink Module for FS S5800 Series  
             | 2x1G/10G SFP+ Ethernet Port (1 G SFP compatible for S5800-48T&24T, 1 G SFP is Combo with the last 2 RJ45 ports) |
### Primary Features and Benefits

I. Multiple Software Images to Provide Flexible Deployment Options

FS S5800 Series offers 6 different FiberstoreOS software images:

- **Enterprise Image**: IP Base, IP Services, and Advanced IP Services
- **Metro Image**: Metro IP Base, Metro IP Services, and Metro Advanced IP Services

The system vendors can choose the image with features for today and have the option for smoothly upgrading in the future.

II. Carrier Class and High Performance Switching Core ASIC

FS S5800 Series Switches provides advanced L2/L3/MPLS features to meet the requirements in Carrier Ethernet and Enterprise network application. Single chip can provide 200Gbps high switching capability with main features including full IPv4/IPv6 stack, IPv4/IPv6 tunneling, Multiple Protocol Label Switching (MPLS), Hierarchy Quality of Service (H-QoS), On-chip OAM (802.1ag/Y.1731/CFM/EFM), Protocol Independent APS (<50ms protect switching) and 1588/SyncE.

III. Multilayer Switching with High Capability at wire-speed

FS S5800 Series provides 176 Gbps switching capacity and 132 Mpps Layer2&Layer3 packet forwarding rate with wire-speed for all ports. The switch provides 48 GE fixed Ethernet ports, and 4 x 1000M SFP optical ports (Only for S5800-48T&S5800-24T) or 2/4 SFP+ 1/10GE ports with different uplink modules to meet the requirement of high density 1GE downlink ports and 10GE uplink ports.

IV. Modularized Uplink Port Design

The FS S5800 Series supports modularized uplink ports: NM-4SFPP with 4 SFP+ ports, NM 2SFP+ with 2 SFP+ ports and NM-4SFP with 4 SFP ports (Only for S5800-48T& S5800-24T). Customers can select different modules according to the requirements which make great investment protection.

V. System Design for Green and Energy Saving

The FS S5800 Series supports modularized fans with speed control as well as power consumption adjustment which is based on the flow status of the ports. Both can highly save the energy and go for green.

VI. Customized Profile for Different Deployment Scenarios

The Flexible Table Management (FTMTM) technology employed by Fiberstore FS S5800 Series offers multiple table size configuration profiles as optimized choices for different network scenarios.
S5800-24F & S5800-48F could support up to 64K MAC address table. Besides these pre-defined profiles, application-specific profile is also applicable with Fiberstore Advanced Service.

VII. MEF Certification Ready Products

Carrier Ethernet is a huge growth area for emerging connectivity services which is a comparatively simple, cost-effective and familiar technology whose migration to the WAN will lead to more flexible network connectivity while reducing overall IT costs. However, its deployment is constrained by a shortage of global standards that provide assurance that equipment from different vendors will interoperate. In order to accelerate the adoption of Carrier Ethernet services and technology worldwide, Metro Ethernet Forum (MEF) initiated a certification program to assure them and their customers that products are compliant with MEF specifications. The Fiberstore FS S5800 Series is ready to pass certification of MEF 9 and 14 supporting industry-standard Carrier Ethernet services and advanced QoS features.

VIII. Intelligent Ethernet OAM: Complete Fault Management and Performance Guarantee

End-to-end OAM based on IEEE 802.1ag and ITU-T Y.1731 enable Ethernet service providers to monitor their services proactively, measure end-to-end performance and guarantee that the customers receive the contracted SLA. Fault management includes CCM, LTM, LBM and performance measurement includes Frame Delay, Frame Delay Variation. FS S5800 series also supports single segment (link) OAM according to 802.3ah for remote management and fault indication, including remote loopback, dying gasp, and MIB parameters retrieval.

IX. Uninterrupted Performance Assurance and Multi-Node Redundancy and Robust Fault Protection System

- **Hardware**
  - Hot-swappable power modules and fans.
  - Power module supports AC or DC 1+1 redundancy.
  - Fans support N+1 redundancy.
  - Real-time environment monitoring for chipset temperature, status of fan and power, etc.
- **Software**
  - LACP, ECMP, VRRP, STP/RSTP/MSTP, ERPS, SmartLink for redundancy and load-balancing.
  - Fiberstore-patented Sysmon for CPU status monitoring and protection upon unpredictable fault.
X. Outstanding QoS Control with Flexible Classification and Queuing Mechanism

Rich QoS mechanisms are implemented in Fiberstore FS S5800 Series including flow classification based on source/destination MAC, source/destination IP address, protocol type, TCD/UDP port number to meet complicated network requirements. Moreover, Fiberstore FS S5800 Series provides 8 hardware queues per port to support multi-stage scheduling (WDRR, SP) and Tail Drop/WRED. 3-stage shaping (queue/group/port) can be applied for flow management. Meanwhile, ingress and egress policer provide bandwidth monitoring with a granularity of up to 32Kbps. Both srTCM (Single Rate Three Color Marker) and trTCM (Two Rate Three Color Marker) can be supported.

XI. Triple-Play Service Support with Bandwidth Guarantee for High Quality Application

The Fiberstore FS S5800 Series offers high bandwidth for Triple-Play services such as IPTV, video monitoring. The built-in QoS capabilities and flexible queuing technologies guarantee high quality of services. Rich multicast protocol set (IGMP Snooping, IGMP v1/v2, PIM-SM) supports up to 16K multicast groups, 1K physical replications and 4K logical replications per group. With FiberstoreOS software, IPTV service and multicast time-delay control is fully supported.

XII. Comprehensive Network Security Policy

The Fiberstore FS S5800 Series supports subscriber-class, switch-class and network class security control. Basic IPv4/IPv6/MAC ACL is employed to filter IPv4/IPv6/Non-IP packet respectively and can be applied to both port and VLAN. Besides that, extended IPv4/IPv6 ACL is also available. In a single ACL rule, both IP and MAC ACE can take effect to filter IP and Non-IP packets simultaneously. Fiberstore ARP Inspection and IP Source Guard features prevent network from malicious ARP attack. CPU Traffic Protection, Storm Control features optimize CPU load. Centralized 802.1x authentication forbids illegal user access to the network.

Product Features and Benefits

<table>
<thead>
<tr>
<th>Feature</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Triple-Play Services</td>
<td>● Advanced QoS functionalities provide differentiated class of service treatment to support triple-play service.</td>
</tr>
</tbody>
</table>
## Multicast VLAN Registration (MVR)

- Continuously sends multicast streams in a multicast VLAN while isolating the streams from subscriber VLANs to reduce overall bandwidth requirement for multicast distribution in ring-based network.
- Comprehensive security solution to provide protection of subscribers, switch, and network at the network edge.

### MEF9 Services
- Up to 4K EVC are supported
- QinQ based EPL/EVPL, ELAN/EVLAN service support

### MEF14 Services
- Per port egress shaping and minimum 1Mbps increments up to port speed
- Ingress and egress per port policing and minimum 64Kbps increments up to port speed.
- CIR/PIR, srTCM / trTCM
- Classification criteria, COS, VLAN
- Ingress / Egress PBIT remarking – 802.1Q VLAN
- Ingress / Egress PBIT remarking – 802.1ad SVLAN
- PBIT Transparency – 802.1Q VLAN
- PBIT Transparency – 802.1ad VLAN

### Intelligent Ethernet OAM
- Industry standard OAM 802.1ag (CFM) feature supports end-to-end network monitoring and troubleshooting. This greatly reduces OPEX for customers by reducing the numbers of site visits needed to troubleshoot network problems.
- Industry standard OAM 802.3ah (EFM) feature allows continuous standard Ethernet network across the globe, eliminating non-native transport such as Ethernet over ATM from the access networks, which eases OAM and provides compatibility with new transport media types, e.g., PON.

### Layer 2 VPN Service
- Fiberstore Selective QinQ feature strictly conforms to 802.1Q and 802.1ad and provides more flexibility to customers while classifying VLAN based on port, original VLAN or L2/L3 information for the purpose of segregating subscriber traffic in the network.
- VLAN translation in both ingress and egress translates VLAN IDs carried in the data packets between different virtual LANs or between VLAN and non-VLAN encapsulating interfaces at Layer 2.
- Virtual Private Wire Services (VPWS) provide point-to-point connectivity between customer sites, where the service provider network emulates a set of wires between the customer’s sites over the underlying MPLS tunnel.
- Virtual private LAN service (VPLS) provides any-to-any (multipoint) communication over IP/MPLS networks to extend each site in a LAN to extend the edge of the service providers’ network.
- Port or VLAN based VPWS and VPLS are both supported; both services can work in raw or tagged mode.
- QinQ access based Hierarchical VPLS (H-VPLS) is also supported.
### Layer 3 VPN Service

- Multi-VRF CE (VRF-lite) forms virtual packet-forwarding tables by associating one or more Layer 3 interfaces with each VRF, allowing the creation of multiple Layer 3 VPNs on a single Fiberstore FS S5800 Series Switch. Interfaces in a VRF could be either physical, as in an Ethernet port, or logical, as in a VLAN switch virtual interface (SVI).
- VRF-aware services (ARP, Ping, Traceroute, Telnet, SSH and FTP).
- Support for multiple IP routing protocols (RIPv1/v2, OSPF) offers flexible options for peering between end customers and service providers.
- Fiberstore Multi Protocol Label Switching (MPLS)/ Border Gateway Protocol (BGP) VPN technologies provide more scalability, better capability of management and higher efficiency by ASIC forwarding.

### Availability and Reliability

### Superior Redundancy for Fault Backup

- IEEE 802.1d Spanning Tree Protocol (STP) support for redundant backbone connections and loop-free networks simplifies network configuration and improves fault tolerance.
- IEEE 802.1s Multiple Spanning Tree Protocol (MSTP) allows a spanning-tree instance per VLAN, for Layer 2 load sharing on redundant links.
- IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) provides rapid spanning-tree convergence independent of spanning-tree timers and also offers the benefit of distributed processing.
- Link Aggregation Control Protocol (LACP) allows the creation of Ethernet channeling with devices that conform to IEEE 802.3ad.
- Equal-Cost MultiPath (ECMP) works for routing packets along multiple paths of equal cost for load balancing and redundancy.
- Virtual Router Redundancy Protocol (VRRP) is supported to create redundant, failsafe routing topologies.
- Fiberstore-patented Sysmon mechanism monitors real-time CPU status and pauses switch work while unexpected fault happens.
- ERPS (Ethernet Ring Protection Switching) is used to create a fault tolerant topology by configuring a primary and secondary path for each VLAN.
- SmartLink is a fault tolerant topology for two uplink application, can provide < 50ms protection time.

### High-Performance IP Routing

- Basic IP unicast routing protocols (static, Routing Information Protocol Version 1 [RIPv1], and RIPv2) are supported for small-network routing applications.
- Advanced IP unicast routing protocols (Open Shortest Path First [OSPF] and Border Gateway Protocol Version 4 [BGPv4]) is supported for load balancing and constructing scalable LANs.
- Protocol Independent Multicast sparse mode (PIM-SM) for IP multicast routing is supported.
- Up to 256 switch virtual interfaces (SVIs) are supported; all physical ports can be routed port.
Optical Communication System

### Datasheet

#### Robust Multicast Control
- Proxy Address Resolution Protocol (ARP) allows a network host to answer the ARP queries for the network address that it does not have configured on the receiving interface.
- Gratuitous Address Resolution Protocol (ARP) assists in the updating of other machines’ ARP tables and helps detect IP conflicts and ensure load balancing on incoming traffic in some cases.
- IPv6 routing support in hardware for maximum performance.
- VRRP provides dynamic load balancing and failover for routed links.

#### Bandwidth Optimization
- Internet Group Management Protocol (IGMP) snooping provides fast client joins and leaves of multicast streams and limits bandwidth-intensive video traffic to only the requestors.
- IGMP Snooping TCN provides quick response capability to topology changes so that the service provider’s multicast service will not be paused even the topology is altered temporarily.
- IGMP immediate leave overrides the normal checks to see if there are other hosts or proxy devices on the local segment interested in the multicast group and shorten the time of changing channels for IPTV services.
- IGMP filtering provides multicast authentication by filtering out nonsubscribers and limits the number of concurrent multicast streams available per port.
- IGMP proxy enables the system to issue IGMP host messages on behalf of hosts that the system discovered through standard IGMP interfaces to allow users on any downstream network to join an upstream sourced multicast group.
- Multicast VLAN Registration (MVR) allows one single multicast VLAN to be shared among different subscriber VLANs on the network which improves bandwidth utilization by reducing multicast traffic in the subscriber VLANs and simplifies multicast group management.

#### IPv6 Support
- Per-port broadcast, multicast, and unicast storm control prevents faulty end stations from degrading overall systems performance.
- Equal-cost routing facilitates Layer 3 load balancing and redundancy across the stack.
- Switch-port autorecovery automatically attempts to reactivate a link that is disabled because of a network error.
- Up to 256 Link Aggregation groups are supported with 8 member ports per group.

#### ASIC Chipset Based IPv6 Support
- Fully distributed handling and forwarding IPv6 packets at wire speed.
- Chipset supports most of IPv6 routing protocol and tunneling protocol.
- Support chipset based native tunneling.
- Support chipset based IPv6 ACL and QoS.
- Advanced chipset based IPv6 multicast.
## QoS and Control

- Fiberstore QoS queuing mechanism differentiates flows according to any L2/L3/L4 identity and enqueues flexibly; meanwhile modifies CoS/DSCP and limits throughout.
- Ingress and egress policer is provided based on 802.1p Class of Service (CoS), Differentiated Services Code Point (DSCP), VLAN ID and QoS ACLs (IP ACLs or MAC ACLs), which can include source and destination IP address, source and destination MAC address, Layer 4 TCP/UDP information, or any combination of these fields.
- Ingress and egress aggregate policer reinforces traffic policing across all of the applied ports. QoS applies the bandwidth limits specified in an aggregate policer cumulatively to all the flows matching the criteria.
- Weighted Random Early Detection (WRED) generally drops packets selectively based on IP precedence and packets with a higher IP precedence are less likely to be dropped than packets with a lower precedence; WRED ensures higher priority traffic to be delivered with a higher probability than lower priority traffic.
- In contrast to WRED, Tail Drop provides per QoS class congestion avoidance at the queues before a disruption occurs.
- Queue, service and port based three-level traffic shaping contributes to up to 64Kbps granularity.
- Weighted Deficit Round Robin (WDRR) extends the quantum idea from the DRR to provide weighted throughput for each queue. Different queues have different weights and the quantum assigned to each queue in its round is proportional to the relative weight of the queue among all the queues serviced by that scheduler.
- Strict Priority queue (SP) provides strict-priority queuing for a traffic class that enables delay-sensitive data, such as voice, to be sent before packets in other queues are sent. The priority queue is serviced first until it is empty.
- Strict priority queuing helps ensure that the highest-priority packets are serviced ahead of all other traffic.
- 8 egress queues per port help enable differentiated management of up to 8 traffic types across the stack.
- Support 8 differ-service domain, could provide flexible differ service for the ports.
- There is no performance loss when using advanced QoS functionalities.

## Network Security

### Comprehensive Security Solutions
- Subscriber Security
  - IEEE 802.1x allows dynamic, port-based security by providing user authentication.
- IEEE 802.1x and port security are provided to authenticate the port and manage network access for all MAC addresses, including that of the client.
- DHCP Snooping prevents malicious users from spoofing a DHCP server and sending out bogus addresses. This feature is used by other primary security features to prevent a number of other attacks such as Address Resolution Protocol (ARP) poisoning.
- DHCP Snooping helps administrators with consistent mapping of IP to MAC addresses. This can be used to prevent attacks that attempt to poison the DHCP binding database and to rate-limit the amount of DHCP traffic that enters a switch port.
- Dynamic ARP Inspection helps ensure user integrity by preventing malicious users from exploiting the insecure nature of the ARP protocol.
- IP Source Guard prevents a malicious user from spoofing or taking over another user's IP address by creating a binding table between client's IP and MAC address, port, and VLAN.

**Switch Security**
- Secure Shell (SSH) Protocol, Kerberos, and Simple Network Management Protocol Version 3 (SNMPv3) provide network security by encrypting administrator traffic during Telnet and SNMP sessions.
- Multilevel security on console access prevents unauthorized users from altering the switch configuration.
- RADIUS authentication facilitates centralized control of the switch and restricts unauthorized users from altering the configuration.
- Three MAC based security mechanisms are offered to control access:
  - MAC filtering
  - MAC port binding
  - MAC number limitation per port
- CPU traffic protection refuses abnormal data flow to avoid malicious attack.

**Network Security**
- Fiberstore ACLs allows for multiple layer rules coexistence such L2 with L3, or even with L4.
- Fiberstore security VLAN ACLs on all VLANs prevent unauthorized data flows from being bridged within VLANs.
- Port-based ACLs for Layer 2 interfaces allow security policies to be applied on individual switch ports.
- Three different mechanisms are supported to protect the STP topology from loops or undesired topology changes caused by addition of switches, mis-configuration of devices or even malicious attempts to override the current Spanning Tree Root Bridge.
- Bridge Protocol Data Unit (BPDU) Guard
- Bridge Protocol Data Unit (BPDU) Filtering
- Root Guard
- BPDU Guard and BPDU Filtering protect against possible loops created by switches added on ports configured with the STP Port Fast
## Manageability

<table>
<thead>
<tr>
<th>Feature</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Root Guard protect against added switches attempting to become the Root Bridge.</td>
<td></td>
</tr>
</tbody>
</table>

### Superior Manageability

- FiberstoreOS Software CLI support provides common user interface and command set with all Fiberstore routing switches.
- IEEE 802.1ag Connectivity Fault Management (CFM) provides standard support for transport fault management. It allows for discovery and verification of path for Layer 2 services.
- IEEE 802.1ah Ethernet in the First Mile (EFM) allows detection of faults on an EFM link and enable service providers to fully monitor a customer’s end-to-end Ethernet service.
- Layer 2 traceroute eases troubleshooting by identifying the physical path that a packet takes from source to destination.
- Network Timing Protocol (NTP) client guarantees accurate and consistent time synchronization with the whole network.
- File Transfer Protocol (FTP) / Trivial File Transfer Protocol (TFTP) reduce the cost of administering software upgrades by downloading from a centralized location.
- Dynamic Host Configuration Protocol (DHCP) Relay allows a DHCP relay agent to broadcast DHCP requests to the network DHCP server.
- IGMP snooping provides fast client joins and leaves of multicast streams and limits bandwidth-intensive video traffic to only the requestors.
- Multifunction LEDs per port for port status; half-duplex and full-duplex mode; and 10BASE-T, 100BASE-TX, 1000BASE-T, 10GBASE-LR indication as well as switch-level status LEDs for system, redundant-power supply, and bandwidth utilization provide a comprehensive and convenient visual management system.

## Applications

### I. Network Application 1: Enterprise Data Center Network

FS S5800 series can provide access ports for high density GE servers, and 4 10GE uplink ports to Aggregation or Core switches.

Figure 1 shows a deployment example using the Fiberstore FS S5800 Series for Data Center Access network topology as TOR access devices.
II. Network Application 2: Carrier’s Metro Network

Ring network topology allows service provider to establish robust network and operate multiple services. The Fiberstore FS S5800 Series is ideal for service provider Metro Ethernet access deployment, allowing providers to offer convergent application portfolio to their enterprise or individual users. Typically FS S5800 Series switches are installed in a building basement serving many customers in the branch building or at the head office.

Figure 2 shows the deployment example using the Fiberstore FS S5800 Series for ring network topology as access devices.

Figure 2-Ring Network Topology with the FS S5800 Series
### Product Specifications

#### Table 3-Descriptions and Specifications

<table>

                       L2/L3 packet – 130.95Mpps (S5800-48T/ S5800-48F)  
                       • CPU:  
                       Cavium CN5010-500BG564-CP-G/500MHz  
                       • Memory:  
                       32 MB FLASH (Maximum 256MB extensible)  
                       256 MB DRAM (Maximum 512MB extensible) |
| Connectors and Cabling | • 10/100/1000BASE-T ports: RJ-45 connectors Cat-5 UTP cabling  
                        • 100BASE-FX, 1000BASE-SX, -LX SFP-based ports: LC fiber connectors  
                          (single-mode or multimode fiber)  
                        • 10GBASE-LR SFP+ based ports: LC fiber connectors (single-mode or multimode fiber) |
## Description

- Ethernet Management port: RJ-45 connectors, Cat-5 UTP cabling
- Management console port: RJ-45-to-DB9 cable for PC connections

## Power Supply

- **AC:**
  - 150W Input
  - Actual power consumption for 48 GE ports < 75W
  - Actual power consumption for 48 GE and 4 x 10GE ports < 85W
  - Operating voltage: 100 ~ 240V; 50/60Hz
  - Maximum voltage: 90 ~ 264V; 47~63Hz
- **DC:**
  - 150W Input
  - Actual power consumption for 48 GE ports < 75W
  - Actual power consumption for 48 GE and 4 x 10GE ports < 85W
  - Operating voltage: -48 ~ -60V
  - Maximum voltage: -36 ~ -72V

## Indicators

- Per-port status LEDs: link integrity, disabled, activity, speed, and full-duplex indications
- System status LEDs: system indications
- Power status LEDs: active, failure indications
- Fan status LEDs: active, failure indications

## Dimensions (H x W x D)

- S5800-24F4S: 4.36 x 44.0 x 40.0 cm (1.73 x 17.5 x 15.7 in.)
- S5800-48F4S: 4.36 x 44.0 x 40.0 cm (1.73 x 17.5 x 15.7 in.)

## Weight

- S5800-24F4S: 6.3kg (One PSU, one 4x10GE SFP+ Card)
- S5800-48F4S: 6.3 kg (One PSU, one 4x10GE SFP+ Card)

## Environmental Ranges

- Operating temperature: 0 to 45 ºC (Long term)   -5 to 55 ºC (Short term)
- Storage temperature: -40 to 70 ºC
- Relative humidity operating: 10 to 90% (non-condensing)
- Relative humidity non-operating: 0 to 95% (non-condensing)

## Acoustic Noise

- International Organization for Standardization (ISO) 7779: < 45dB

| S5800-48F    | ● 176-Gbps switching capability  
               ● Standard 1U 19'' rack mountable  
               ● 48x100/1000 Base-X SFP Ethernet Port  
               ● Modular Uplink |
| S5800-24F    | ● 128-Gbps switching capability  
               ● Standard 1U 19'' rack mountable  
               ● 24x100/1000 Base-X SFP Ethernet Port  
               ● Modular Uplink |
| S5800-NM-4SFP+ | ● Uplink Module for FS S5800 Series  
                        ● 4 x 1G/10G SFP+ Ethernet Port (1G SFP compatible for S5800-48T&24T, 1G SFP is Combo with the last 4 RJ45 ports) |
| S5800-NM-2SFP+ | ● Uplink Module for FS S5800 Series  
                        ● 2 x 1G/10G SFP+ Ethernet Port (1G SFP compatible for S5800-48T&24T, 1G SFP is Combo with the last 2 RJ45 ports) |
